

CREID Early to Mid-Career Researcher Forum

Thursday 25 July 2019, 3-4pm

The Peter Doherty Institute for Infection and Immunity, Melbourne

Strategies for raising your profile and creating a greater impact of your research

Presenter:

Dr Cameron Webb is a Hospital Scientist at NSW Pathology, Westmead Hospital, a Clinical Lecturer at the University of Sydney and Academic Leader (Research Education) for Westmead Clinical School. He is also a researcher within the Marie Bashir Institute for Infectious Diseases and Biosecurity and an Associate Investigator of the CRE for Protecting the Public against Emerging Infectious Diseases (CREID).

As a medical entomologist experienced in mosquito and mosquito-borne disease monitoring and management in coastal Australia, Cameron's work focusses on developing surveillance technologies for endemic and exotic mosquitoes and integrating mosquito management into urban and wetland design.

He is an experienced and skilled science communicator, with regular invitations to talk about mozzies and disease risk on national television and local radio (even a star spot on "The Checkout" in 2018), and in public lectures. He utilises social media for good, engaging with his many twitter followers and blogging on a regular basis to promote science, environmental health and ecological management to the broader public.

Cameron is also a regular contributor to The Conversation.

Cameron will take you through the strategies he has used to raise his profile and promote positive public health messages. Come along to hear how you can more widely disseminate your research, as well as share your experiences as EMCRs with public engagement and knowledge dissemination.

The raising your profile session will be followed by a meeting of the Joint-CRE EMCR Academy from 4-5pm. Please join us!

RSVP: gillian.scott@sydney.edu.au or jason.kwong@austin.edu.au
